Applied Linear Algebra

The Decoupling Principle

Second Edition

Lorenzo Sadun

AMS AMERICAN MATHEMATICAL SOCIETY

Contents

Preface to second edition ix

Preface xi

Chapter 1. The Decoupling Principle , 1

Exploration: Beats 8

Chapter 2. Vector Spaces and Bases 9

§2.1. Vector Spaces 9

§2.2. Linear Independence, Basis, and Dimension 14

§2.3. Properties and Uses of a Basis 21

Exploration: Polynomials 24

§2.4. Change of Basis 25

§2.5. Building New Vector Spaces from Old Ones 29

Exploration: Projections 35

Chapter 3. Linear Transformations and Operators 37

§3.1. Definitions and Examples 37

Exploration: Computer Graphics ' 43

§3.2. The Matrix of a Linear Transformation 44

§3.3, The Effect of a Change of Basis 48

1 §3.4. Infinite Dimensional Vector Spaces 51

§3.5. Kernels, Ranges, and Quotient Maps 53

Chapter 4. An Introduction to Eigenvalues 57
§4.1. Definitions and Examples 57
§4.2. Bases of Eigenvectors 59
§4.3. Eigenvalues and the Characteristic Polynomial 61
§4.4. The Need for Complex Eigenvalues 67
Exploration: Circles and Ellipses 71
§4.5. When is an Operator Diagonalizable? 72
§4.6. Traces, Determinants, and Tricks of the Trade 77
§4.7. Simultaneous Diagonalization of Two Operators 82
§4.8. Exponentials of Complex Numbers and Matrices 86
§4.9. Power Vectors and Jordan Canonical Form 90

Chapter 5. Some Crucial Applications 97
§5.1. Discrete-Time Evolution: x(n) = Ax(n — 1) 97
Exploration: Fibonacci Numbers and Tilings 103
§5.2. First-Order Continuous-Time Evolution: $dx/dt = Ax$ 104
§5.3. Second-order Continuous-Time Evolution: $d^2x/dt^2 = Ax$ 108
§5.4. Reducing Second-Order Problems to First-Order 116
Exploration: Difference Equations 119
§5.5. Long-Time Behavior and Stability • 120
§5.6. Markov Chains and Probability Matrices 126
Exploration: Random Walks 135
§5.7. Linear Analysis near Fixed Points of Nonlinear Problems 136
Exploration: Nonlinear ODEs 143

Chapter 6. Inner Products 145
§6.1. Real Inner Products: Definitions and Examples 145
§6.2. Complex Inner Products 149
§6.3. Bras, Kets, and Duality 152
§6.4. Expansion in Orthonormal Bases: Finding Coefficients 158
f
§6.5. Projections and the Gram-Schmidt Process 161
§6.6. Orthogonal Complements and Projections onto Subspaces 167
§ §6.7. Least Squares Solutions 170
Exploration: Curve Fitting 176
§6.8. The Spaces $\mathcal{L}_2$ and L^2 177
§6.9. Fourier Series on an Interval 182

Exploration: Fourier Series 188

Chapter 7. Adjoints, Hermitian Operators, and Unitary Operators 189
§7.1. Adjoints and Transposes 190
§7.2. Hermitian Operators 194
§7.3. Quadratic Forms and Real Symmetric Matrices 200
§7.4. Rotations, Orthogonal Operators, and Unitary Operators 207
Exploration: Normal Matrices 215
/ §7.5. How the Four Classes are Related 216
Exploration: Representations of *SU2* 220

Chapter 8. The Wave Equation 223
§8.1. Waves on the Line 224
§8.2. Waves on the Half-Line: Dirichlet and Neumann Boundary Conditions 227
§8.3. The Vibrating String 232
Exploration: Discretizing the Wave Equation 235
. §8.4. Standing Waves and Fourier Series 237
§8.5. Periodic Boundary Conditions 242
§8.6. Equivalence of Traveling Waves and Standing Waves 250
§8.7. The Different Types of Fourier Series 254

Chapter 9. Continuous Spectra and the Dirac Delta Function 259
§9.1. The Spectrum of a Linear Operator 260
§9.2. The Dirac *5* Function 264
§9.3. Distributions 269
§9.4. Generalized Eigenfunction Expansions: The Spectral Theorem 272

Chapter 10. Fourier Transforms 281
§10.1. Existence of Fourier Transforms 281
§10.2. Basic Properties of Fourier Transforms 286
§10.3. Convolutions and Differential Equations 292
% Exploration: The Central Limit Theorem 294
§10.4. Partial Differential Equations 295
§10.5. Bandwidth and Heisenberg's Uncertainty Principle 301
§10.6. Fourier Transforms on the Half-Line 306

Chapter 11. Green's Functions 311
§11.1. Delta Functions and the Superposition Principle 311
§11.2. Inverting Operators 314
§11.3. The Method of Images 319
§11.4. Initial Value Problems 325
§11.5. Laplace's Equation on R^2 . ,330

Appendix A. Matrix Operations 337
• §A.l. Matrix Multiplication 337
/ §A.2. Row reduction 338
§A.3. Rank 340
§A.4. Solving $Ax = 0$. 341
§A.5. The column space 342
§A.6. Summary 343

Appendix B. Solutions to Selected Exercises 345

Index 369
