<i>Preface</i>	<i>xxi</i>
Introduction	xxiii
B S Gupta, North Carolina State University, USA	
Part 1 Understanding friction in textiles	
1 Textile fiber morphology, structure and properties in relation to friction	3
B S GUPTA, North Carolina State University, USA	
1.1 Introduction	3
1.2 Fiber classification	4
1.3 Formation of man-made fibers	5
1.4 Concepts of semi-crystalline two-phase structures of fibers	6
1.5 Structure and morphology of textile fibers	9
1.6 Fiber properties	17
1.7 Summary	34
1.8 References	34
2 Fundamental concepts of friction and lubrication affecting textile fibers	37
B S GUPTA, North Carolina State University, USA	
2.1 Introduction	37
2.2 The basic laws of friction	38
2.3 Adhesion-shearing theory	39
2.4 Slip-stick patterns in sliding	40
2.5 The role of surface roughness	42

viii Contents

2.6	Deformation and ploughing	42
2.7	The area of contact between metals	43
2.8	The formation and growth of junctions	43
2.9	Normal adhesion	45
2.10	The effect of hardness on friction	45
2.11	Heating at junctions during sliding	46
2.12	The effect of speed on friction	46
2.13	Wear and abrasion	47
2.14	Frictional behavior of elastomers	48
2.15	Rolling friction	50
2.16	The frictional behavior of polymers and fibers	51
2.17	The relationship describing friction in polymers and fibers	53
2.18	Lubrication	54
2.19	Lubrication of polymers and fibers	59
2.20	Friction between lubricated fibers	59
2.21	Summary	63
2.22	Acknowledgments	64
2.23	References	64
3	Friction behaviour of fibrous materials used in textiles	67
	B S GUPTA, North Carolina State University, USA	
3.1	Introduction	67
3.2	Differences in structure and properties of fibers, metals and elastomers	68
3.3	Classical friction behavior	69
3.4	Frictional behavior of fibers in experimental investigations	70
3.5	A structural model of friction behavior	71
3.6	Generalized equations and the structure of the friction constants a and n	75
3.7	Factors playing a role in friction	76
3.8	Experimental results from selected studies	77
3.9	Friction in textiles under extreme normal forces	88
3.10	Summary	91
3.11	Glossary	91
3.12	Acknowledgements	92
3.13	References	93
4	Stick-slip phenomena in textiles	95
	R KOVAR, Technical University of Liberec, Czech Republic, B S GUPTA, North Carolina State University, USA and Z Kus, / Technical University of Liberec, Czech Republic	
4.1	Introduction	95

4.2	Physical basis of SSP	96
4.3	Impact of SSP on textiles	102
4.4	Review of experimental principles for measuring SSP	110
4.5	Experimental results	120
4.6	Rheological description of SSP	152
4.7	Scope for future research on SSP in textiles	169
4.8	Sources of further information	171
4.9	Glossary	171
4.10	Acknowledgements	171
4.11	References	171
5	Experimental methods for analyzing friction in textiles	174
	B S GUPTA, North Carolina State University, USA, J O AJAYI, Abubakar University, Nigeria and M KUTSENKO, Goulston Technologies, USA	
5.1	Introduction	174
5.2	Relevance of test methods to processing and use of textiles	175
5.3	Friction models and parameters	175
5.4	Classification of test methods	178
5.5	Fundamental test methods based on rectilinear motion	179
5.6	Measurement and characterization of friction in fabrics	196
5.7	Fabric surface roughness characterization	197
5.8	Subjective assessment of friction	204
5.9	Summary: testing friction in fabrics	208
5.10	Standard test methods and commercially available friction meters for yarns	208
5.11	Standard friction tests for staple fibers and nonwovens	216
5.12	Standard friction test and commercial apparatus for fabrics: the KES system	217
5.13	References	219
Part II	Friction in particular textile fibers, structures and processes	
6	Friction and surface characteristics of cotton fibers	225
	Y E EL MOGAHZY, Auburn University, USA	
6.1	Introduction	225
6.2	Cotton fiber surface and frictional characteristics at the microscopic level	227
6.3	Cotton fiber surface and frictional characteristics at the macroscopic level	230

x	Contents	
6.4	Cotton surface treatments	246
6.5	Summary	249
6.6	References	250
7	Friction, felting and shrink-proofing of wool	253
	J A RIPPON, Deakin University, Australia	
7.1	Introduction	253
7.2	The chemical and physical structure of wool	253
7.3	Surface friction of wool	259
7.4	Shrinkage of wool	265
7.5	Methods of reducing the felting shrinkage of wool	269
7.6	Commercial shrink-resist processes	276
7.7	Future trends in the shrink-resist treatment of wool	282
7.8	Summary	282
7.9	References	283
8	Friction and surface characteristics of synthetic fibers	292
	Y E EL MOGAHZY, Auburn University, USA	
8.1	Introduction	292
8.2	The developments of synthetic fibers	292
8.3	Surface characterization of synthetic fibers	294
8.4	Surface wettability	310
8.5	Surface cleanability and decontamination	312
8.6	Surface lubrication	315
8.7	Friction behavior in wet media	319
8.8	The stick-slip phenomenon	321
8.9	Surface finish	323
8.10	Summary	325
8.11	References	325
9	The role of fiber friction in staple fiber processing	329
	V K KOTHARI and A DAS, Indian Institute of Technology, India	
9.1	Introduction	329
9.2	Friction in fibers	329
9.3	The importance of fiber friction in staple yarn formation	331
9.4	Changes in fiber friction during spinning	332
9.5	Control of fiber friction by spin finish	334
9.6	Fiber friction at different stages of spinning	335
9.7	Product quality	345
9.8,	References	349

10	Friction in woven fabrics	351
	J O AJAYI, Abubakar University, Nigeria	
10.1	Introduction	351
10.2	Definition of fabric friction	352
10.3	Stick-slip motion in fabrics	352
10.4	Geometric considerations in woven fabrics	353
10.5	The effects of fabric structure on friction	356
10.6	The effects of yarn friction	366
10.7	The effects of finishing treatments on fabric friction	367
10.8	The effects of testing variables	376
10.9	Surface classification	382
10.10	Summary	383
10.11	Glossary	383
10.12	References	384
11	Finishes and treatments to control friction in textile fibers	386
	M KUTSENKO and T W THEYSON, Goulston Technologies, USA	
11.1	Introduction	386
11.2	Using the Stribeck lubrication curve to analyze friction in fibers	390
11.3	Fabric finishes and high speed yarn-to-solid body friction	397
11.4	Fabric finishes and low speed fiber-to-fiber friction	409
11.5	Summary	416
11.6	References	417
12	Boundary lubrication phenomena in coated textile surfaces	419
	Y Li and J P HINESTROZA, Cornell University, USA	
12.1	Introduction	419
12.2	Using lateral force microscopy to analyze friction behavior	420
12.3	Effect of lubricant properties on friction behavior	424
12.4	Types of textile lubricant	432
12.5	Boundary lubrication phenomena in textile materials	435
12.6	Summary	443
12.7	Glossary	444
12.8	References	444
